

KLEAR KARMA

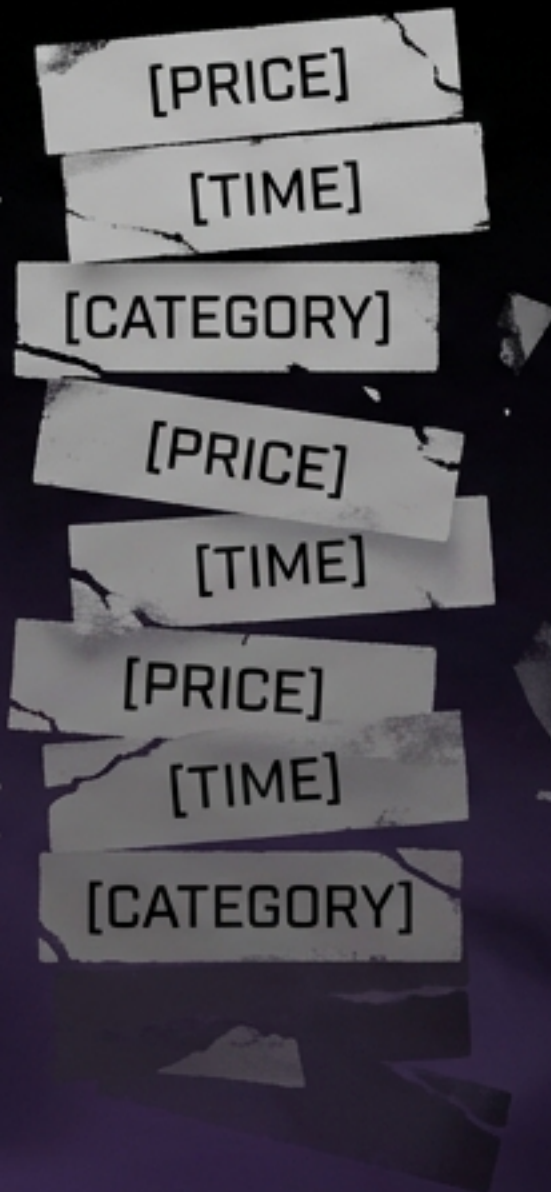

Klear Karma Mirror.

Turn reflection into tokenized
intent and consent-safe
practitioner support.

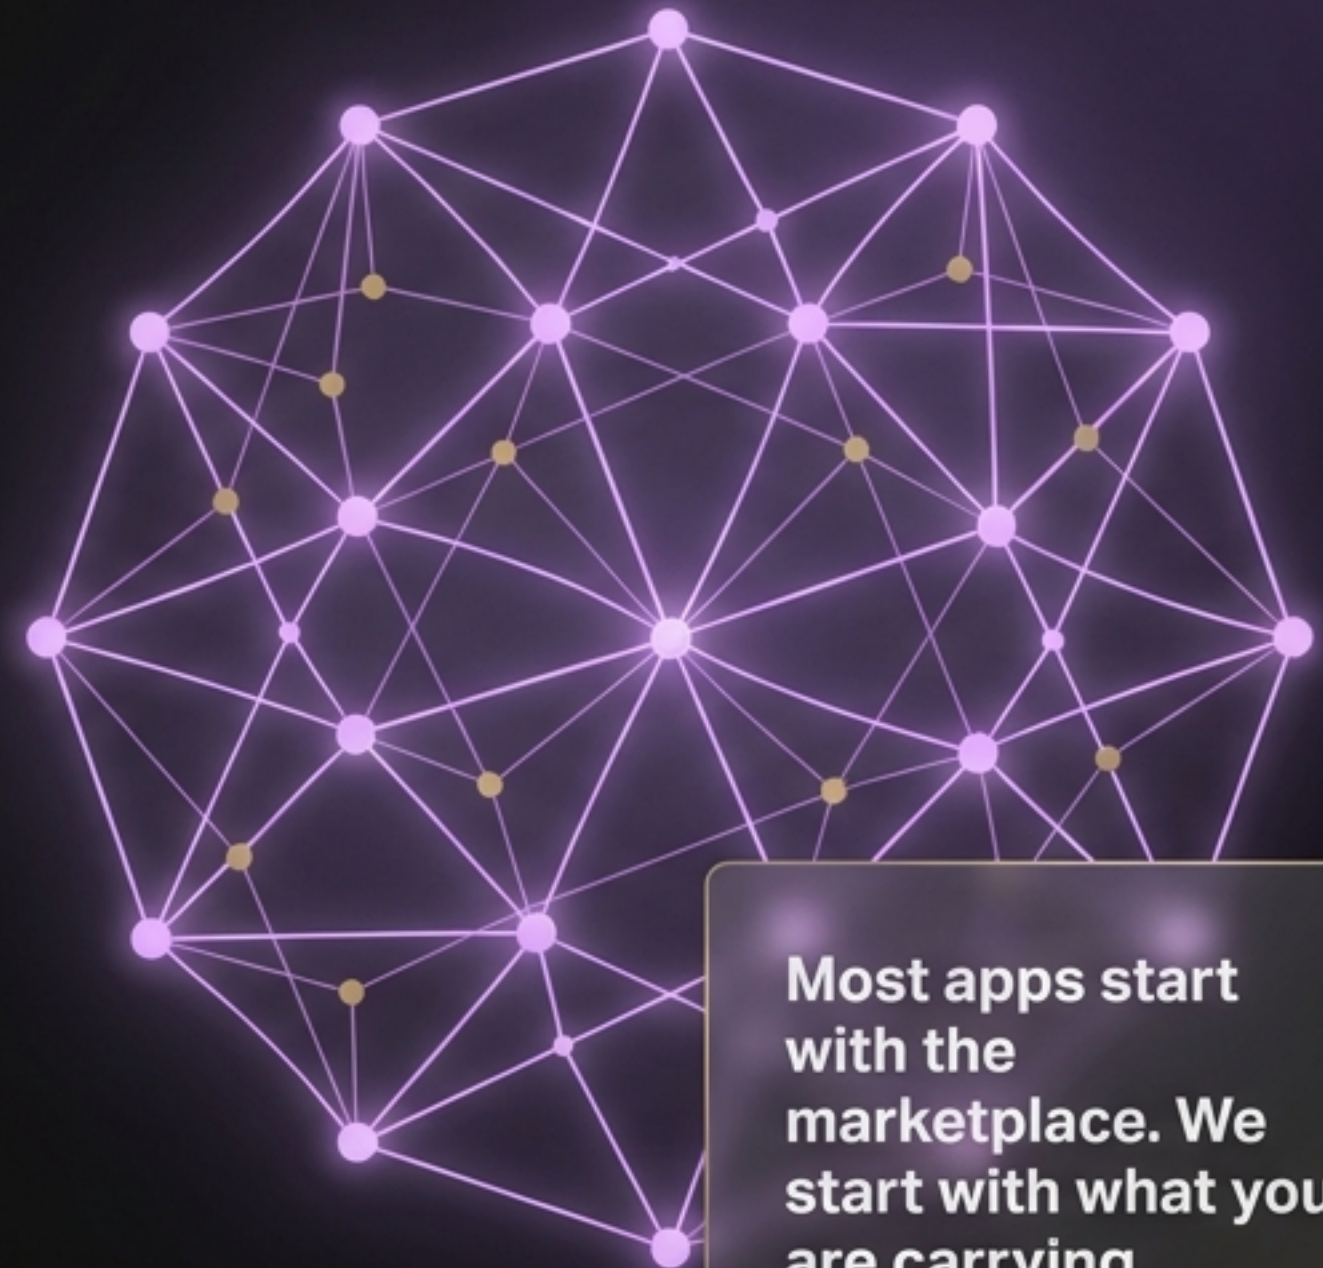

A quieter way to find
verified spiritual support.
Reflection before search.

The Problem With Category-First Browsing

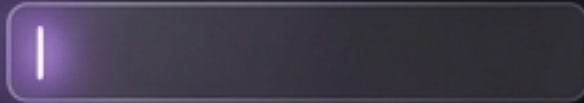

- **Seekers:** Forced to pick a category before understanding the root question. High risk of privacy loss when sharing vulnerable context.
- **Practitioners:** Flooded with high-volume, low-context leads from generic directories.

Most apps start with the marketplace. We start with what you are carrying.

The Mirror-to-Handoff Loop

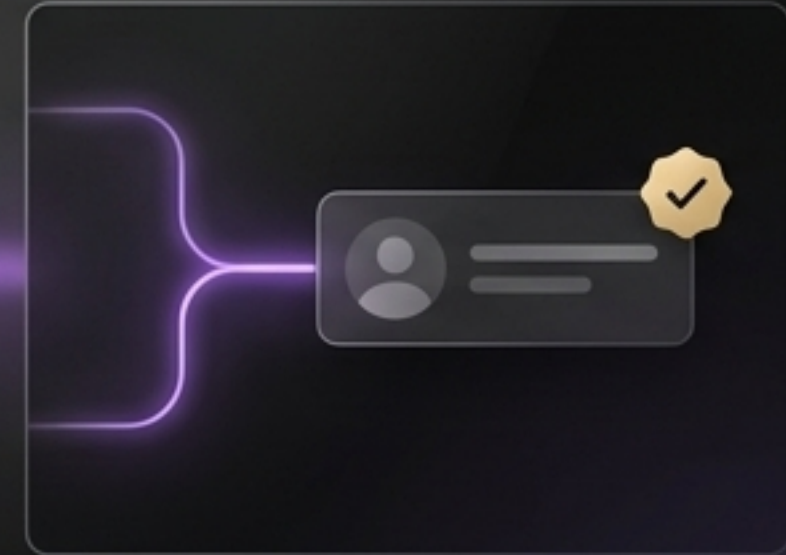

Step 1: Ask & Summarize

Mirror asks one primary question at a time, summarizing lived context without asserting clinical or spiritual authority.

Step 2: Map & Consent

Generates a Seeker Map. The user explicitly controls which private reflections pass through the cryptographic trust boundary.

Step 3: Verified Handoff

Routes approved context only to verified practitioners ready to provide high-context support.

Engineered for Discernment.

Tokenized Intent Engine.

Validates utility before transaction. New users receive **369** free Mirror tokens instantly.

Consent-Safe Seeker Maps.

Raw birth details and private reflections remain cryptographically bounded until explicit release.

Symbolic AI Boundaries.

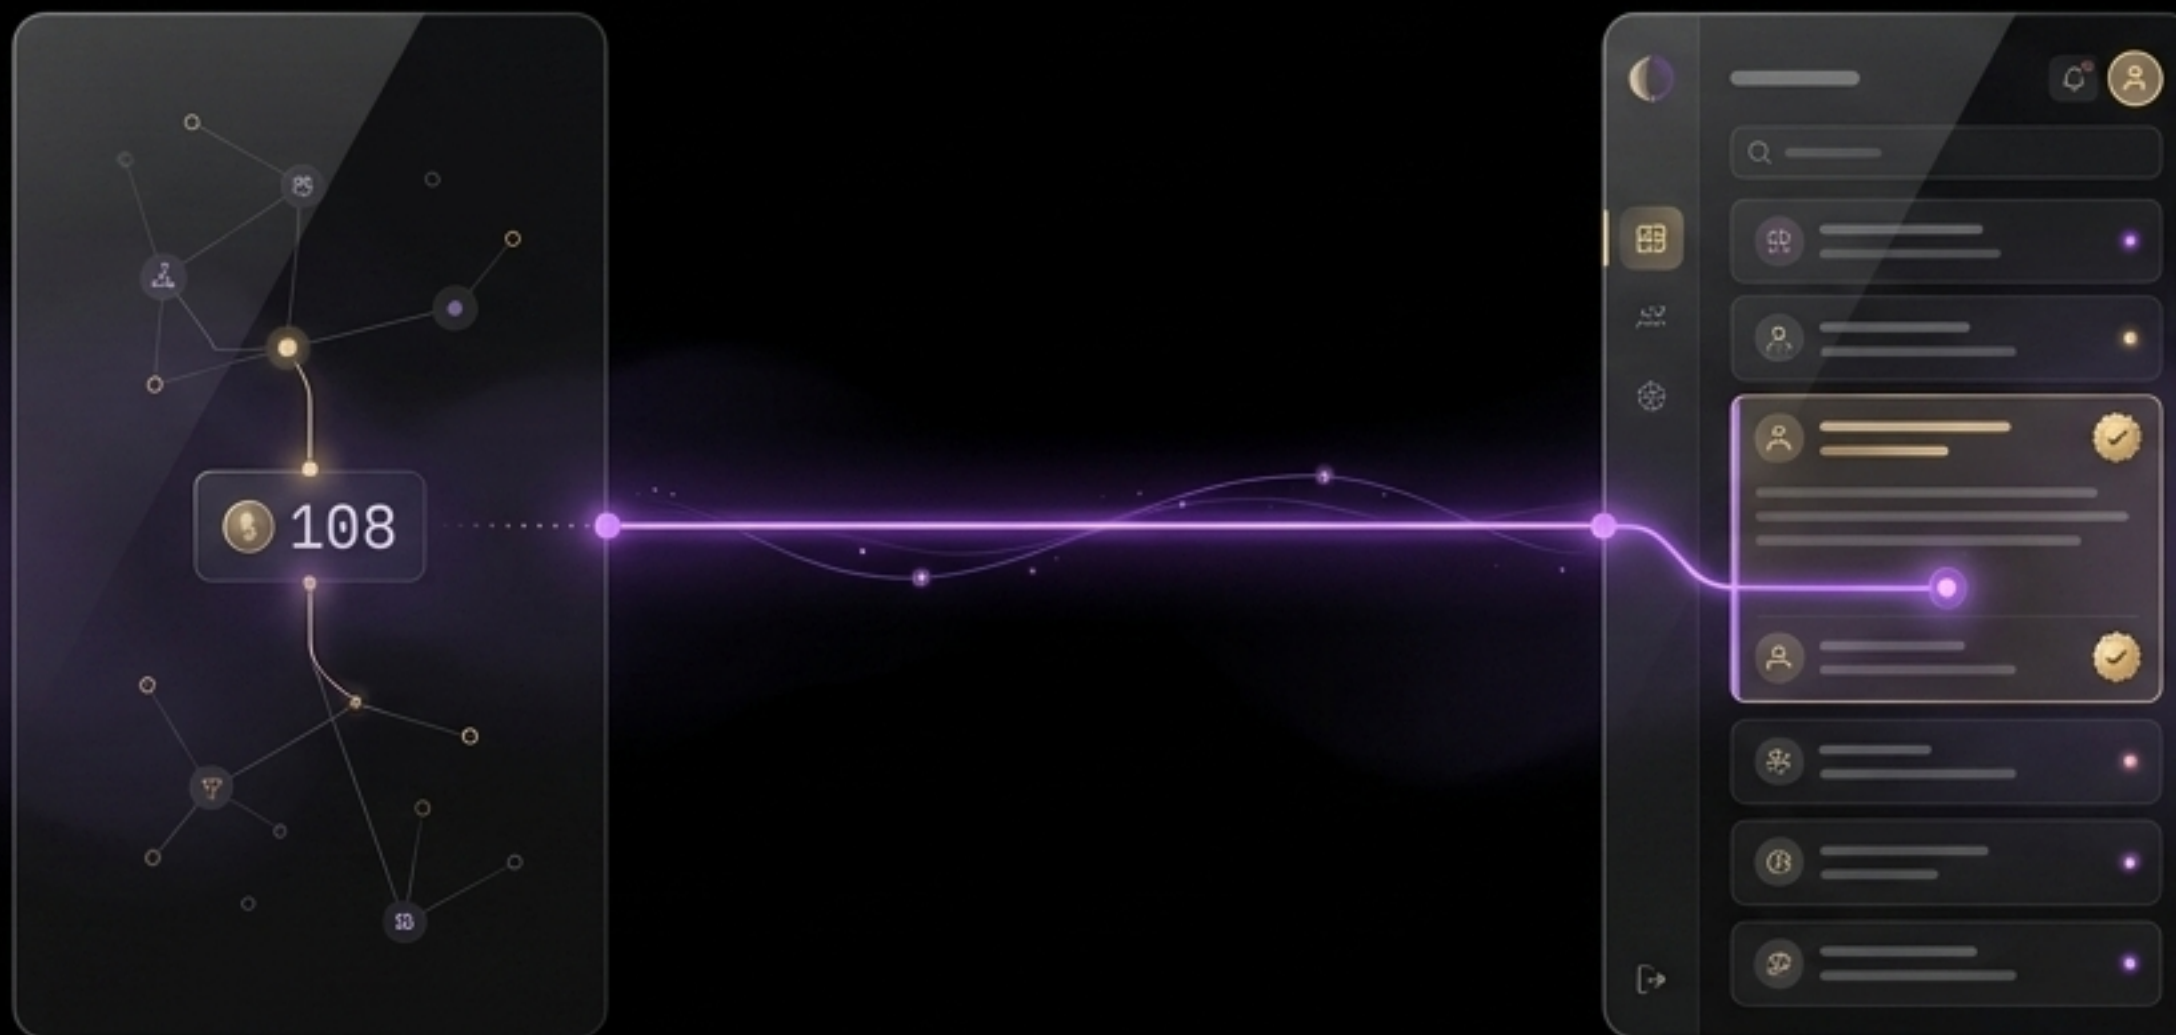

Structured reflection using symbolic context.
Zero clinical, predictive, or certainty-based claims.

Verified Trust Layer.

Practitioner network strictly gated by KYC, verified modalities, and field credibility. No consultation commissions in MVP.

Context in Context

The Premium Transition

Feeling overwhelmed, a seeker spends 108 tokens on the opening Mirror flow to distill their anxiety into a structured question. They feel seen before paying for a session.

The High-Context Handoff

A somatic worker receives an inbound request. Instead of a cold booking, they receive a consent-approved resonance thread, allowing them to prepare specialized, immediate support.

The Trust Advantage.

	Klear Karma	Generic Directories	Spiritual Apps
Discovery Logic	Mirror-led reflection 	Filters/Search	Content consumption
Context Safety	Explicit consent boundaries 	Public profiles	N/A
Authority Claims	Symbolic/Reflective 	Unverified	Predictive/Certainty
Business Moat	Paid token intent 	Ad-driven/Volume	Subscription

We compete on context and trust formation, not generic supply.

The Paid Activation Protocol.

Recharge only if reflection creates value.

'Paid Activation' is strictly defined as a user recharging at least 299 tokens within 90 days of interaction. No reliance on vanity metrics or free signup volume.

Proving Trust Before Scale.

Our controlled invite-led Thailand and India beta targets strict validation metrics, explicitly avoiding vanity scale.

Paid-Activated Users
(Recharge > 299, not free signups)

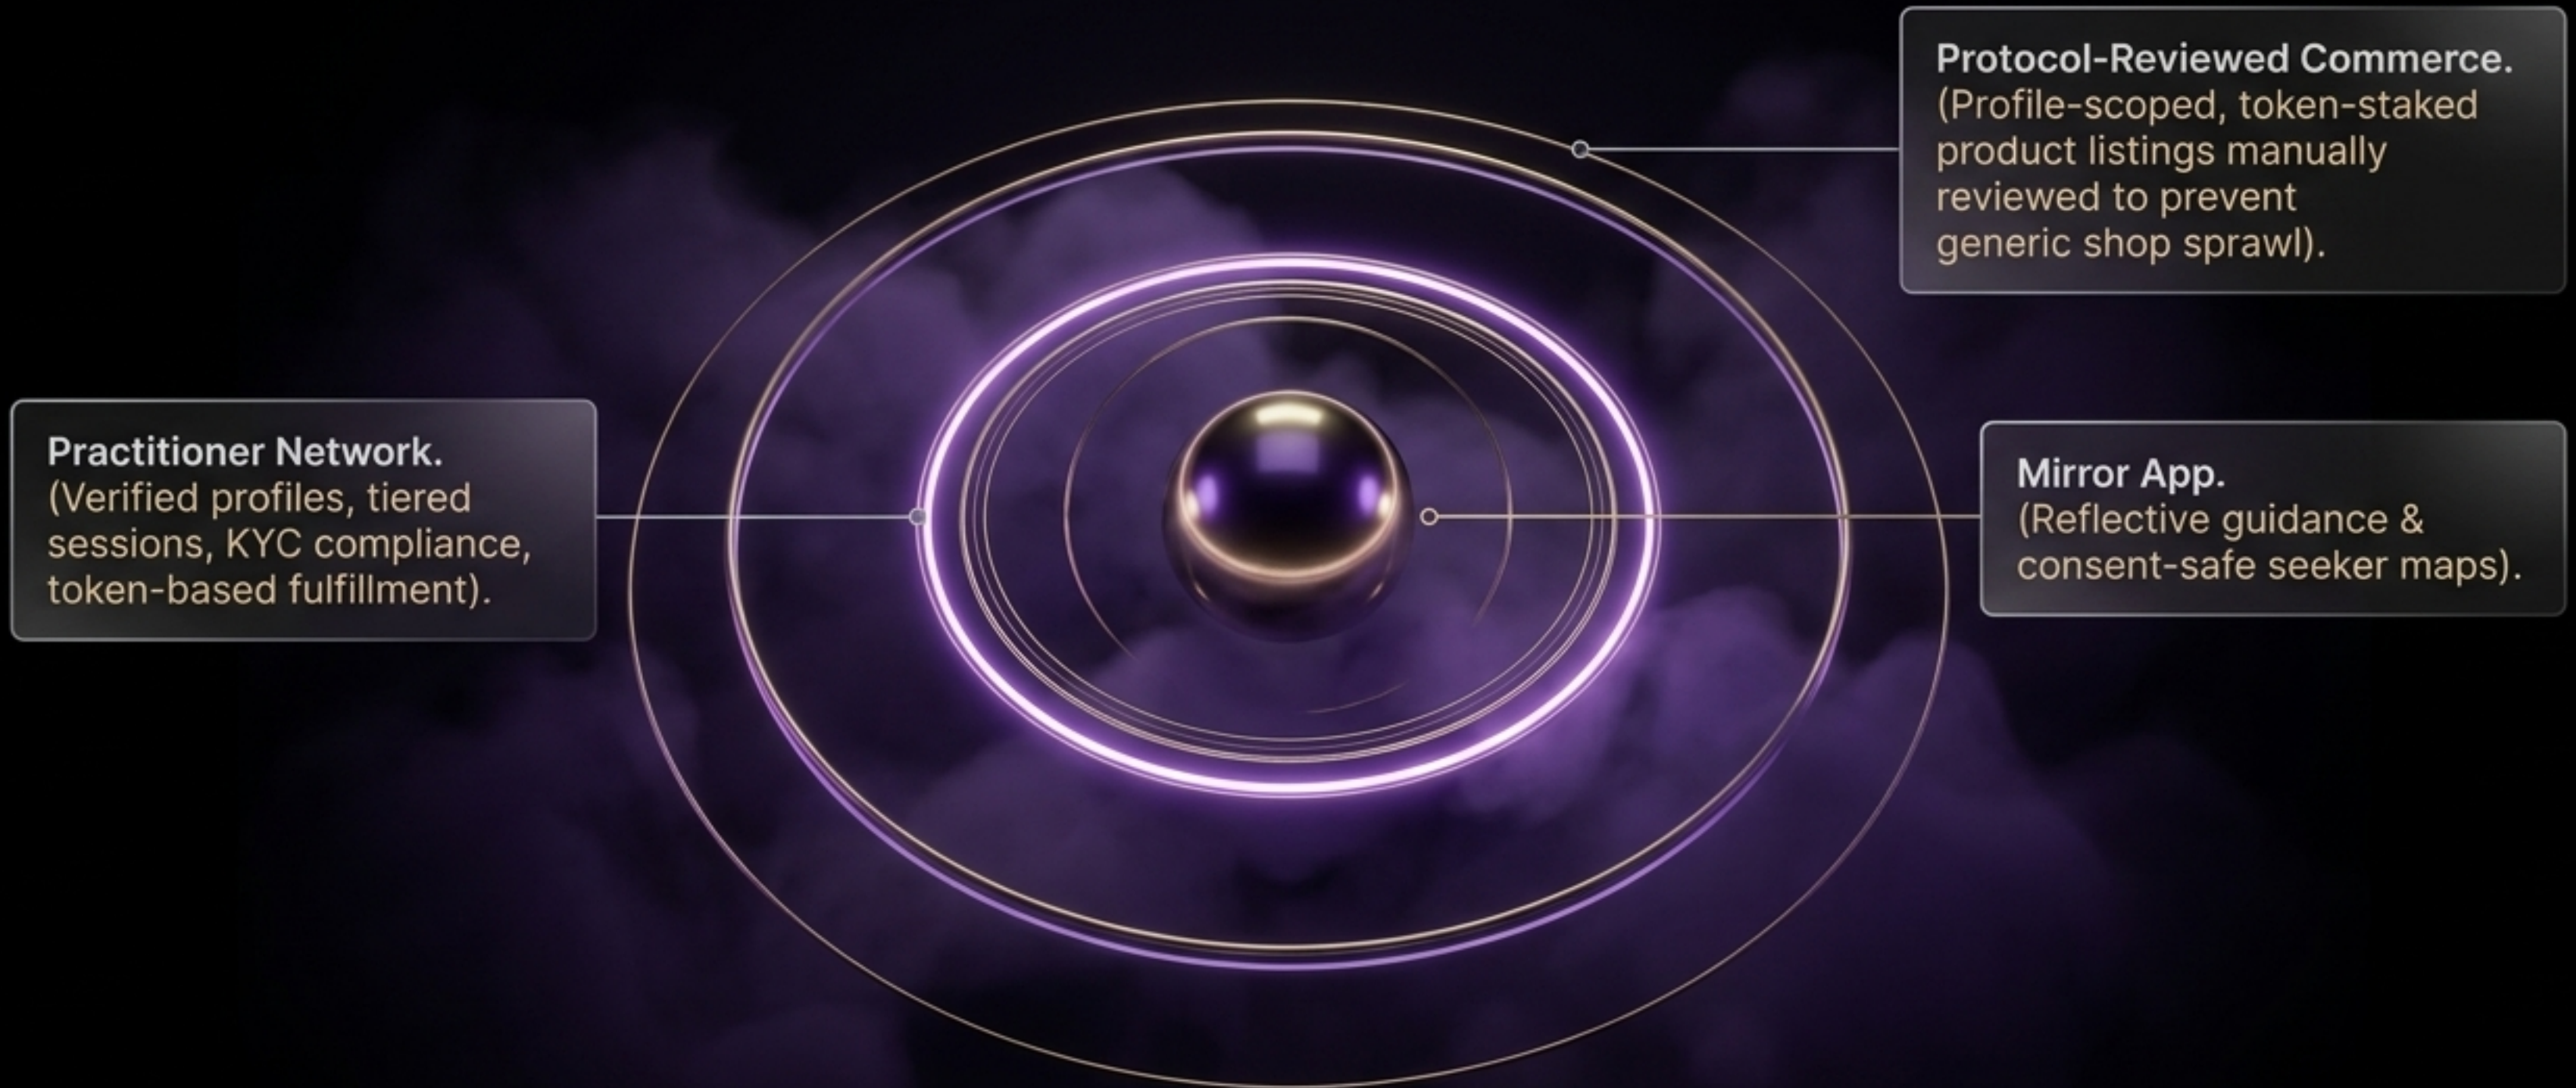

Repeat Purchasers

Completed Healer
Consultations

No public press quotes or fake proof. We scale from trust and token velocity, not traffic.

The Expanding Ecosystem.

Start with the question, not the category.

The controlled Thailand and India beta is opening to premium seekers and verified practitioners.
